Ever since the first one rolled off the assembly line Jerry Miller has had a passion for Retractable & Convertibles. Over the past fifty-five years he has accumulated an immense specialized knowledge from his work with these cars. Since the beginning Jerry has restored numerous I.F.R.C. judged showcase cars, six 1957 supercharged (F) cars and many 1957 2x4 (E) cars out of the countless Retractable and Convertibles he has restored.

Jerry has also collected over two hundred 1957 thru 1959 parts, cars and also carries all of the new reproduction and N.O.S. items that can be found. If you need information or restoration assistance please feel free to call, 479-750-1681, Jerry will be more than happy to help you with any of your needs.

ORDERING INFORMATION

Ordering by Mail:

Please list year, make and model of vehicle for which you are ordering, complete part number and description. Include phone number where you may be reached during the day. Provide complete address with street name and house number.

Customer Number:

Please use your computer Customer Number on all order forms. If you do not have a Customer Number, one will be assigned to your account. Please use it on all future orders to speed up delivery of your parts.

Payment:

Although personal checks are welcome, expect a two week delay in shipping due to clearance of the check. Money orders, bank certified checks, MasterCard, Visa and Discover may be used also.

Shipping:

Most parts are shipped via UPS, but other services are available upon request.

Merchandise Return:

Please inspect merchandise upon arrival. Returns within 30 days of shipping date are O.K. After 30 days a 20% restocking charge will be applied. After six months a 50% restocking charge will be applied. For no reason will merchandise be accepted after one year. All returned merchandise must be accompanied by a copy of the invoice and letter of explanation. Failure to do so will result in a delay of an exchange or refund.

Claims:

All claims must be taken up with carrier. Please keep merchandise in the original carton for the carrier to inspect.

Foreign Shipments:

Add twenty five percent (25%) of total parts ordered for postage. Payments must be in U.S. Funds.

Due to other supplier price increases . . . PRICES ARE SUBJECT TO CHANGE WITHOUT NOTICE.

We guarantee to replace or at our option to repair any product or parts thereof which are found to be defective in material or workmanship within one year from the date of shipment. Our obligation with respect to such products or parts shall be limited to replacement or repair and in no event shall we be liable for consequential or special damages, or for transportation, installation, adjustment or other expenses which may arise in connection with such products or parts. THIS WARRANTY IS EXPRESSLY MADE IN LIEU OF ANY AND ALL OTHER WARRANTIES EXPRESS OR IMPLIED INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS.

Reduces Water Temperature
Up To 40 Degrees
Add To Radiator
Stops Overheating

CUSTOMER SERVICE BULLETIN

Most Vehicle Cooling Systems Hold 3 1/2 To 4 Gallons Of Liquid.

A 50/50 Mix Of Water And Antifreeze Is Common.

For Best Results With
40 BELOW
STOPS OVERHEATING
Do The Following.

1. Remove All Antifreeze From System By Draining The Radiator And Flushing The Engine Block.

Note: Although 40 BELOW And Antifreeze Are Compatible, Antifreeze Absorbs Heat And Holds It. This Prevents 40 BELOW From Working At Maximum Efficiency. Therefore, Remove All Antifreeze From The System.

2. Install A New Thermostat Between 160 - 180 Degrees If Possible.

3. Begin To Fill Cooling System With Fresh Water. When Radiator Is About Half Full Take One Or Two Cans Of 40 BELOW, Or STOPS OVERHEATING, Shake Well And Pour Into A Bucket Along With 1/2 Gallon Of Ethelene Glycol Type Antifreeze And 1/2 Gallon Of Water. Stir Well, Then Pour Contents Into Radiator.

Start Engine. Continue To Fill Radiator With Water. Leave Engine Running. Heat Will Build And The Thermostat Will Open. Continue To Fill Radiator Until System Is Completely Full And No Air Pockets Exist. Replace Radiator Cap, Close Hood And Go For At Least A 30 Minute Ride To Properly Circulate The 40 BELOW, STOPS OVERHEATING Product.

The Following Companion Products Will Provide Additional Cooling In The Engine And Transmission. Use At Regular Service Intervals.

As A Result Of Their Use, Water Temperature Can Drop Even More.

4. No. 8012 Engine Cool Formula

Add One 12 Ounce Bottle To The Engine Oil (Contains No Teflon). It Will Lower Oil Temperature Up To 57 Degrees At The Crankshaft.

This Cools The Engine Oil And Stops It From Trying To Superheat The Water. Therefore, The Water Temperature Drops Even More.

Note: Performance And Competition Engines Use No. 8080 Or No. 1600.

5. No. 4012 Trans Cool Automatic Transmission Formula

Add One 12 Ounce Bottle To The Automatic Transmission. It Instantly Cools ATF Up To 57 Degrees, Stops Foaming, Frees Sticking Valve Bodies, And Doubles Transmission Life. A Must For RV's, Street Rods, Towing, Performance Vehicles, Cars And Trucks. Excellent In Manual Transmissions Using ATF. Dramatically Improves Shifting.

WHY WOULD MY ENGINE RUN HOT? IT MAY BE ONE OR MORE OF THE FOLLOWING

1. A Lean Air/Fuel Ratio. (Also Check Fuel Pump And Filters).
2. Too Much Timing/Retarded Timing/Advance Curve Malfunction.
3. Clogged Radiator/Collapsed Hose (Restricted Water Flow)
4. Clogged Engine (Restricted Water Flow)
5. Stuck Thermostat/Incorrect Thermostat.
6. Bad Water Pump
7. Incorrect Water Pump Speed (Too Slow/Too Fast).
8. Radiator Too Thick.
9. Wrong Pressure Cap.
10. No Shroud Around Fan. Improper Fan Positioning Within Shroud.
11. Bad Fan Design-Stock Factory Type Usually Works Best.
12. High Volume Or Hi Pressure Oil Pump.
13. Electric Fan (Pullers / Pushers) Blocking Air Flow.
14. Too Much Anti-Freeze.
15. Wrong Type Anti-Freeze
16. FLOW TEST: Begin With Cool Engine. Remove Radiator Cap. Start Engine. Bring Engine Up To Operating Temperature So That The Thermostat Opens. Increase Engine Speed To 2000 RPM. If Water Gushes Out Of Radiator There Is A Flow Restriction In The System. This Must Be Corrected For Proper Cooling.
17. Wrong Spark Plugs (ie. Heat Range).
18. Wrong Gasoline Type (Try 89 Or 92 Octane).
19. Clogged Catalytic Converter.
20. Clogged Injector System.
21. Exhaust Getting Into The Water Due To A Cracked Head Or Blown Head Gasket. Have Your Local Radiator Shop Test Your System For Carbon Dioxide.
